

“ Everything we do is confidential, and our reputation depends on the protection of our client information. Given the volume of client transactions we conduct on a daily basis, it was a daunting task to find a solution that would enable us to cost-effectively encrypt all files being transferred internally as well as externally. We had tough security requirements to meet, but with limited resources and an aggressive deployment schedule, SecureZIP was a client-friendly solution that was simple to deploy and support. ”

Vice President
Financial Services Provider

PKWARE, INC.

As the inventor and continuing innovator of the ZIP standard, PKWARE is a global technology leader known around the world as the expert in data compression and file management. With the launch of SecureZIP in 2005, PKWARE successfully entered the data security marketplace, combining ZIP compression and strong encryption to deliver a data-centric security solution.

This integrated approach allows PKWARE to help customers solve critical business problems with an easily deployed and highly scalable solution that is compatible with all major computing platforms.

Today, over 30,000 customers worldwide use PKWARE solutions to optimize the management and protection of their data, as well as access to critical information. PKWARE customers include FIS, CVS Caremark, Macy's, IBM[®], Hewlett-Packard and many other industry leaders. Additionally, over 200 government entities use PKWARE products, including the Centers for Medicare & Medicaid Services and the Federal Aviation Administration.

PKWARE's philosophy is to help meet the data management and security demands of our customers. Our solutions save customers valuable resources and maximize their return on investment by helping them:

- Meet data security compliance standards and requirements
- Protect sensitive data during movement or storage
- Exchange data securely with outside partners
- Avoid liability risk due to data loss or theft
- Reduce data center costs and operational overhead
- Extend the useful life of the existing IT infrastructure

Met government compliance requirements and mandates by securing information sent via email

Eliminated the risk of sensitive data being exposed by encrypting customer information when in storage or transit

Ensured data remained protected during all steps of the transfer process, including with external partners

Encrypted all sensitive files and emails/ attachments to avoid liability risk if it was lost or stolen

Increased business efficiencies by reducing file encryption, compression, and transfer time

Conserved business resources by implementing a security solution that integrated with existing infrastructure

Meet data security compliance standards and requirements

There are currently over 100 different regulations pertaining to data protection and security. These regulations, such as PCI DSS, HIPAA, SOX, and FIPS 140, can come with sizeable fines if your organization is found to be non-compliant. Using PKWARE's strong encryption solutions to protect your sensitive information addresses these industry-specific compliance requirements and many others.

Protect sensitive data during movement or storage

Information needs to be readily available to effectively respond to business needs; therefore, large amounts of potentially sensitive data are being exchanged frequently within an organization. Reducing file size using ZIP compression and adding strong data-centric security ensures that information can be moved securely and efficiently.

Exchange data securely with outside partners

Daily business activities require information to be exchanged outside the perimeter of your organization. Sometimes this cannot be done because the data is not secured appropriately. You need to ensure that information won't be lost, stolen, or exposed once it leaves your network. PKWARE provides a cost-effective solution that allows you to exchange information securely with business partners, all at no cost to your partners.

Avoid liability risk due to data loss or theft

A data security breach could lead to irreparable damage to your reputation and revenue. PKWARE helps our customers avoid the costs, legal penalties, and damaged reputations that can be caused by compromised data. We provide a solution that integrates naturally into existing workflows and provides end-to-end data encryption, ensuring your sensitive information is always protected both inside and outside your organization

Reduce data center costs and operational overhead

It is easy to become trapped between the critical need for data security and the additional costs and operational burdens traditionally associated with it. PKWARE's integrated data security and compression solutions reduce file size to help limit the resources required in the data center. In addition, we aim to maximize the infrastructure investments you've already made to deliver a solution that works throughout the organization quickly and effectively.

Extend the useful life of the existing IT infrastructure

We know you've already made significant investments in your organization's IT infrastructure. PKWARE's scalable solutions are designed to leverage the ZIP standard and interoperate across all major computing platforms. This ensures that they can integrate with your current infrastructure without requiring you to make additional major IT investments.
