

Improve the efficiency of data exchange and archiving processes

PKZIP® is the industry-leading compression utility that aggregates files while greatly reducing transmission times and required storage space. PKZIP for server also helps process automation tasks more easily and efficiently.

CONSERVE STORAGE SPACE AND REDUCE FILE TRANSFER TIME

PKZIP reduces bandwidth consumption and file size by as much as 95%, decreasing DASD costs, conserving transmission bandwidth, and minimizing processing time to meet project windows.

EXCHANGE DATA ACROSS DESKTOPS, SERVERS, MIDRANGE, AND MAINFRAME SYSTEMS

PKZIP is available on all major platforms and supports data exchange between Windows desktops, UNIX/Linux and Windows servers, IBM i midrange, z/OS and mainframe operating systems. PKZIP converts data to the appropriate format based on the type of system it is being transferred to. PKZIP will also decrypt ZIP files encrypted with PKI or passphrases.

PKWARE is the only single-source vendor of ZIP compression products across all major enterprise operating systems.

AUTOMATICALLY DISTRIBUTE FILES FROM SERVER TO DESKTOP*

By creating self-extracting files, compressed archives sent from servers are automatically decompressed onto desktops. This process is simple for desktop users requiring just a few clicks, allowing for quick and easy transfer of files to desktop systems. *Please note that PKSEFX® functionality is licensed for internal use only.*

REPORT ERRORS VIA STANDARD REPORTING MECHANISMS

PKZIP reports errors and events through popular enterprise management tools like HP Openview®, Tivoli®, and Unicenter®. By supporting SYSLOG and SNMP, PKZIP reduces administrative costs by leveraging investments in management reporting tools.

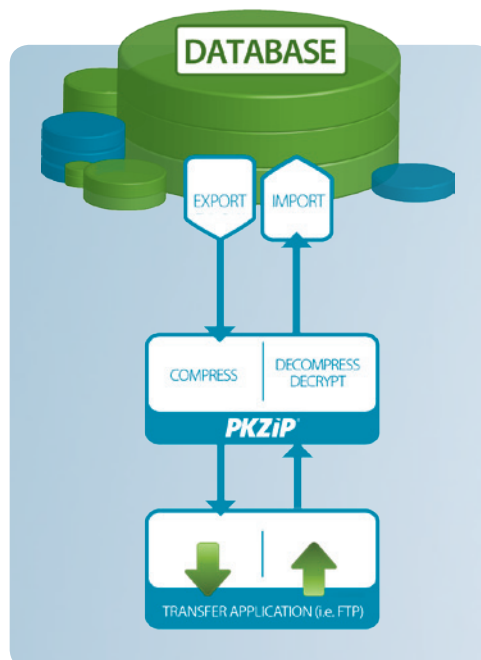

IMPROVE PROCESSING EFFICIENCIES WITH APPLICATION INTEGRATION

With application integration, data can be streamed directly into and out of applications. Many other products require the zip file to be extracted into a data file before it can be read by an application. Application integration eliminates this step, improving operational efficiency by reducing the number of steps needed to process data.

FEATURES AND BENEFITS

- Conserve storage space and reduce file transfer time
- Improve processing efficiencies with Application Integration
- Automatically distribute files from server to desktop*
- Distribute compressed files to end-users via email*
- Report errors via standard reporting mechanisms
- Protect files with strong passphrase-based encryption (available on Windows server only)
- Operates on all major computing platforms, allowing seamless data transfer between operating systems, including z/OS®, i5/OS®, UNIX®/Linux® server, and Windows® server and desktop

*Feature available in PKZIP Enterprise Edition

“ PKZIP compresses the data at least 75% and frequently as high as 90-95%. We wouldn't be able to complete transmissions within the operational window without the use of PKZIP.”

Operations Analyst
IT Services Provider

DISTRIBUTE FILES TO END-USERS VIA EMAIL

Distribution of compressed files to end-users simply requires adding a switch and the destination email address for the recipient(s). Using an available SMTP server, PKZIP's email integration saves processing time and development effort for file distribution to end-users inside or outside an organization.

PROTECT FILES WITH STRONG PASSPHRASE-BASED ENCRYPTION

On the Windows server platform, PKZIP supports AES or 3DES encryption using passphrases to protect valuable information. Files encrypted with PKZIP may be decrypted and extracted on all major enterprise computing platforms using PKZIP, SecureZIP®, or the free ZIP Reader available for Windows.

SECUREZIP - THE NEXT GENERATION OF PKZIP

SecureZIP provides all of the features and capabilities of PKZIP, including efficient compression, sophisticated data management, and cross-platform capability. SecureZIP allows organizations to address both the continuing need for efficient data management, while adding enterprise-class security in a single, interoperable solution. SecureZIP for server:

- Processes encrypted data without staging decrypted data to disk
- Maintains control of organizational data for audit and recovery purposes
- Encrypts data using passphrases, X.509 digital certificates, or both
- Helps meet FIPS 140 compliance regulation

About PKWARE, Inc.

The PKWARE Solution is the only complete system for reducing, moving, storing and securing data across the extended enterprise, both internally and externally, from mainframes to servers to desktops and into the cloud. Used by more than 30,000 corporate entities and over 200 government agencies, PKWARE is the industry standard for portability, ensuring data security and cross-platform computing. PKWARE, a privately held company, is based in Milwaukee, WI with additional offices in New York and the United Kingdom.

SYSTEM REQUIREMENTS

WINDOWS

Enterprise Edition Note:

PKZIP Server for Windows is only available in Enterprise Edition.

- Windows 2003 and higher with IE 6.0 or above
- 256 MB RAM (512 MB recommended)
- 15 MB available disk space
- **Enterprise Edition:** Microsoft Management Console v2.0 running on Windows Server 2003 or later

SOLARIS®

- Solaris 8 or greater on UltraSPARC
- Solaris 10 or greater on x86
- 64 MB RAM (128 MB recommended)
- 20 MB available disk space
- **Enterprise Edition:** Microsoft Management Console v2.0 running on Windows Server 2003 or later

IBM-AIX®

- 5L Version 5.3 (5300-08) or higher
- 6L Version 6.1 (6100-00) or higher
- 7L Version 7.1 (7100-00) or higher
- **Required xLC packages:** xICaix50.rte 11.1.0.2 or later, xICrte 11.1.0.2 or later
- 64 MB of RAM (128 MB recommended)
- 28 MB available disk space
- **Enterprise Edition:** Microsoft Management Console v2.0 running on Windows Server 2003 or later

HP-UX®

- 11iv1 (PA-RISC processor only) with patches: PHCO_29903, PHCO_30238, PHCO_33582, PHCO_35743, PHCO_36503, and PHSS_22535
- 11iv2 or higher with patches: PHSS_39821, PHSS_39897 and PHSS_40537
- 11iv3 or higher with patches: PHSS_39822 and PHSS_40538
- For all HP-UX versions, please install the patches prior to installing PKZIP
- 64 MB of RAM (128 MB recommended)
- 40 MB available disk space
- **Enterprise Edition:** Microsoft Management Console v2.0 running on Windows Server 2003 or later

LINUX®

- RedHat 4 and greater
- SuSE 9 and greater on x86, x86_64, s390, or s390x
- Ubuntu 10.04 (LTS) and greater on x86 and x86_64
- x86_64 requires the 32-bit compatibility libraries for that Linux distribution.
- 64 MB of RAM (128 MB recommended)
- 20 MB available disk space
- **Enterprise Edition:** Microsoft Management Console v1.2 running on Windows Server 2003 or later
