

## Securely exchange information with partners across all major computing platforms

Built on the SecureZIP® standard, SecureZIP PartnerLink™ is a flexible data security solution that complements an organization's diverse IT infrastructures. By enabling secure bi-directional data exchange via any type of storage medium or electronic transfer method, SecureZIP PartnerLink allows a "sponsor" organization to send and receive data securely with partners while extending their unique security policies.

Sponsor organizations can extend their security policies and best practices to an unlimited number of partners by offering them SecureZIP Partner, a free version of SecureZIP. This enables partners to securely send and receive information from their sponsors, regardless of their computing platform or security infrastructure.

### EXCHANGE DATA SECURELY WITH AN UNLIMITED NUMBER OF PARTNERS

SecureZIP PartnerLink can be deployed to as many partners as the sponsor organization requires. New partners can be added at any time, allowing sponsors to expand their partner network without purchasing additional licenses.

### EXTEND CORPORATE SECURITY POLICIES TO PARTNERS

To help ensure business partners comply with corporate policies, sponsor organizations can centrally enforce data security requirements and deploy them to partners. Once SecureZIP PartnerLink is deployed, every time a partner sends sensitive data back to the sponsor, it will be authenticated and secured according to that policy.

### RAPID DEPLOYMENT & EASY ADOPTION BY PARTNERS

SecureZIP PartnerLink secures information based on SecureZIP technology, which compresses, secures, and aggregates files in a single container to provide significant

savings in file storage requirements and email bandwidth. Because it is easy to implement and use, sponsor organizations and their business partners can secure information without complex deployments or end-user training.

### ESTABLISH SECURE EXCHANGE OF DATA WITHOUT REQUIRING PARTNERS TO PURCHASE

Partner organizations do not need to purchase anything in order to communicate securely through SecureZIP PartnerLink. Sponsor organizations freely distribute SecureZIP Partner licenses to an unlimited number of partners, eliminating the financial investment required by partners.

### MAINTAIN CONTROL OF SECURITY POLICIES

Sponsor organizations control security policies from within their organization and deploy them to partners. Central control by the sponsor eliminates the need for partners to be involved in managing and controlling the security of the data being exchanged and ensures the level of data security that the sponsor requires.

## FEATURES AND BENEFITS

Extends data security policies and practices to external business partners

Integrates with existing security investments, ensuring rapid installation and easy adoption by partners

Establishes secure exchange of data without requiring partners to purchase a security solution

Strengthens relationships with business partners, while ensuring data remains protected

Provides technical support for partners at no additional cost

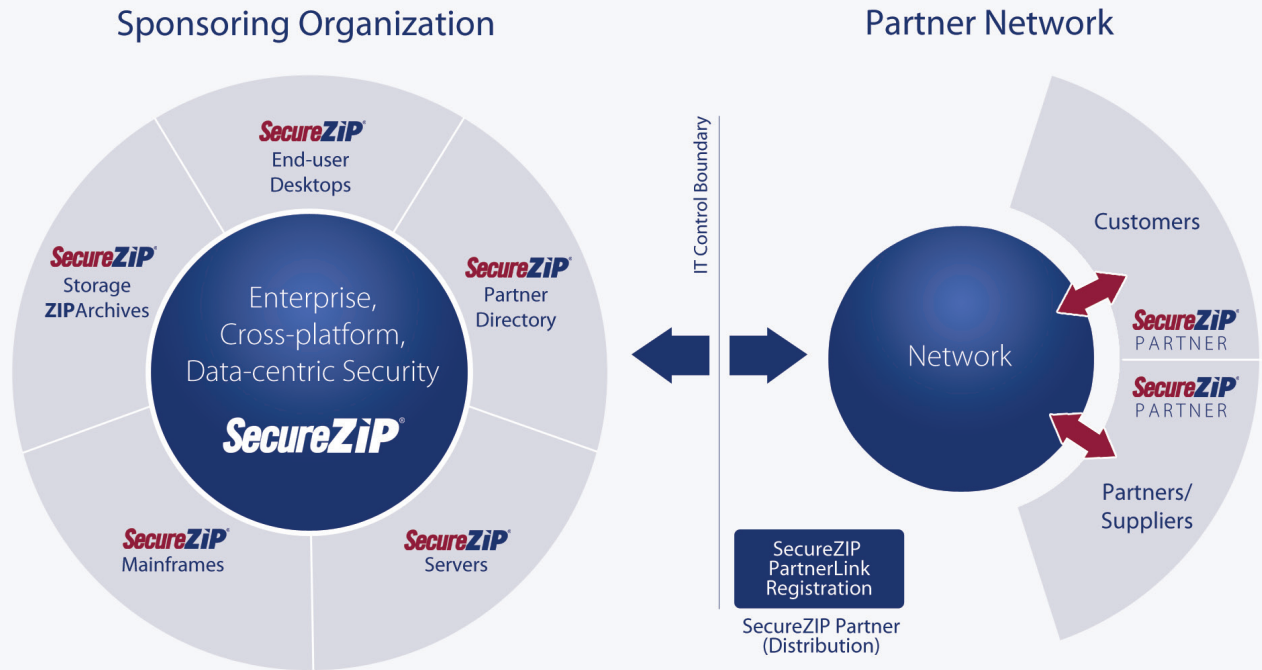

Operates on all major computing platforms, allowing seamless data transfer between operating systems, including z/OS®, i5/OS®, UNIX®/Linux® server, and Windows® server and desktop

“...SecureZIP PartnerLink is virtually the only game in town when it comes to simple single solutions to transfer data in extremely diverse and disparate platform environments from Windows to mainframes.”

# SecureZIP PartnerLink: How it Works

**SecureZIP PartnerLink** Sponsor organizations establish security policies from within their organization and extend them to their business partners. The central control of these policies and best practices by the sponsor eliminates the need for partners to be involved in managing and controlling the security of the data being exchanged and ensures the level of data security that the sponsor requires.

## About PKWARE, Inc.

The PKWARE Solution is the only complete system for reducing, moving, storing and securing data across the extended enterprise, both internally and externally, from mainframes to servers to desktops and into the cloud. Used by more than 30,000 corporate entities and over 200 government agencies, PKWARE is the industry standard for portability, ensuring data security and cross-platform computing. PKWARE, a privately held company, is based in Milwaukee, WI with additional offices in New York and the United Kingdom.
