Disaster Recovery for PKZIP OS/400 5.0 **Conditional Use**

ASi recognizes that there may be periods where the licensing environment established by the customer is no longer valid. Circumstances such as disaster recovery processing or the installation or upgrade of new processors will affect the environment.

In order to accommodate the customer, PKZIP OS/400™ has a process that will allow the customer to continue to use the product for a period of 5 days. During this time, error messages will be displayed on the console (as well as the printout) for each execution of PKZIP OS/400™.

At the end of the grace period, if the license keys are not updated, the product will no longer function in any environment other than to VIEW an archive. This 5-day grace period is designed in such a way that it will not cease to function on a weekend or the Monday following the 5-day grace period.

During this process, you must contact ASi at 1-937-847-2687 to obtain licensing to allow use beyond the condition period.
